A. Introduction

This appendix provides a County Economic Profile, Vulnerability Profile and a more detailed vulnerability analysis of critical facilities and corresponding maps.

B. County Profile

This section of the report, and the data contained herein, is provided to capture a profile of the county including geographic and economic characteristics not previously discussed in Chapter I. In addition, many of the critical infrastructure partners including private sector and public utilities identified.

COUNTY PROFILE

(Source: Enterprise Florida, www.eflorida.com/profiles)

GEOGRAPHY

County Seat: DeLand
 Nearest MSA: Daytona Beach MSA
 Time Zone: Eastern
 Local Area Code(s): 321, 386, 407, 904
 Largest Cities: 1 Deltona
 2 Daytona Beach
 3 Port Orange

Miles* To:

Tallahassee	204
Orlando	40
Tampa	105
Jacksonville	97
Miami	234
Atlanta	378
Chicago	955
Dallas	955
New York	904

*Miles are calculated from county seat.

POPULATION

	Volusia	Florida
1980:	258,762	9,746,961
1990:	370,737	12,938,071

C. Critical Facility Vulnerability Analysis

Considerable staff resources were expended to update the critical facilities inventory. Specific attention was paid to health care facilities such as hospitals and nursing homes; emergency response agencies, hazardous materials, mobile home parks, schools and colleges and community centers. Where possible, communications resources and community infrastructure /utilities such as water and waste-water facilities were located by latitude and longitude and overlaid on the storm tide limits map. Each facility has the name, location, lat/long coordinates, description, critical code and results of the 2010 surge analysis based on the most accurate topographic data and the SLOSH model.

The Critical Facility Inventory (Data base) includes a comprehensive list of critical facilities identified by the State and County Emergency Management Agencies. This inventory is not published as part of the report. However, selected facilities which may require evacuation or mitigation are identified in the tables and maps which follow. The tables indicate vulnerability from storm surge (based on the SLOSH model), freshwater flooding (based on the FEMA Flood Maps) and wildfire (Wildfire Interface/Levels of Concern).

Note that the Wildland-Urban Interface Data used for the vulnerability analysis was based upon 2000 ground conditions. Ground conditions may have changed, thus reducing or increasing the wild fire risk of various county assets. Ground conditions must be verified.
